Fund objective and strategy

The fund seeks long-term capital appreciation. Investing primarily in frontier market equity and equity related securities. The fund adopts a disciplined and an index unconstrained approach that has been honed over a decade of investing in frontier markets. The structured investment process is primarily bottom up and fundamentally driven with top down analysis an additional source of performance and risk control. The result is a high conviction stock portfolio of best ideas.

Period performance - Class I as of 03/31/2024

Calendar year performance - Class I as of 03/31/2024

¹The benchmark was changed to the MSCI Frontier + Select Emerging Markets Countries Capped Index Net TR effective 01/01/2020. Prior to this, the benchmark was the MSCI Frontier Markets Index Net TR from inception. Source: MSCI. The MSCI data is comprised of a custom index calculated by MSCI; and as requested by, Ashmore. The MSCI data is for internal use only and may not be redistributed or used in connection with creating or offering any securities, financial products or indices. Neither MSCI nor any other third party involved in or related to compiling, computing or creating the MSCI data (the "MSCI Parties") makes any express or implied warranties or representations with respect to such data or the results to be obtained by the use thereof, and the MSCI Parties hereby expressly disclaim all warranties of originality, accuracy, completeness, merchantability or fitness for a particular purpose with respect to such data. Without limiting any of the foregoing, in no event shall any of the MSCI Parties have any liability for any direct, indirect, special, punitive, consequential or any other damages (including lost profits,) even if notified of the possibility of such damages. The MSCI Frontier + Select Emerging Markets Countries Capped Index is a customised benchmark that is designed to measure equity market performance of constituent companies in each of the MSCI Frontiers Market Index (50%) and emerging markets crossover markets (50%), which are the Philippines, Qatar, United Arab Emirates, Peru, Colombia, Argentina, Egypt, Pakistan and Kuwait, together with a country cap of 15%. You cannot invest directly in an index.

²MSCI Frontier Markets Index captures large and mid cap representation across Frontier Market Countries. You cannot invest directly in an index.

Past performance does not guarantee future results. The performance data quoted represents past performance and current returns may be lower or higher. The investment return and net asset value will fluctuate so that shares, when redeemed, may be worth more or less than the original cost. To obtain performance current to the most recent month-end, please call 1-866-876-8294. Periods greater than one year are annualized. Returns are calculated as the movement in net price over the specified performance period, assuming full dividend reinvestment. Changes in rates of exchange between currencies may cause the value of investments to decrease or increase. The information above shows only the performance of the Fund's Institutional Class Shares. Although Class A and Class C shares would have similar annual returns (because all the Fund's shares represent interests in the same portfolio of securities), Class A and Class C performance would be lower than Institutional Class performance because of the lower expenses paid by Institutional Class shares of the Fund. The information above does not reflect any sales loads applicable to Class A or Class C shares. The performance shown above would be lower if it reflected sales charges applicable to Class A and Class C shares.

- 103 member global investment team
- 29 dedicated in-house legal and compliance professionals
- 36-strong business development and client servicing team
- USD 51.9 billion* in assets under management as at 31 March 2024.

*Estimated figure only

AUM theme split - by primary fund theme

There can be no guarantee that any strategy (risk management or otherwise) will be successful. All investing involves risk, including potential loss of principal.

4. Themes

Themes

External Debt: this theme/strategy invests in debt instruments issued by sovereigns (government) and quasi-sovereigns (government sponsored) across a universe of 60-80 Emerging Markets countries.

Local Currency and Local Currency Debt: this theme/strategy invests in local currency denominated instruments issued by sovereign, quasi-sovereign and corporate issuers as well as local currencies across a universe of 20-40 Emerging Markets countries.

Corporate Debt: this theme/strategy invests in debt instruments issued by public and private sector corporate issuers across a universe of 60-80 Emerging Markets countries.

Blended Debt: this theme/strategy invests in both hard currency and local currency denominated assets across sovereigns, quasi-sovereigns and corporates across a universe of 60-80 Emerging Markets countries.

Equities: the strategy invests in equity and equity-related instruments within the Emerging Markets including global, regional, small cap and frontier opportunities. These instruments may be denominated in any currency.

5. Definitions

Definitions

Weighted Market Capitalization: The total dollar market value of a company's outstanding shares. Market capitalization is calculated by multiplying a company's shares outstanding by the current market price of one share.

Median Market Capitalization: The middle market capitalization of the sorted list of holdings.

Turnover: A measure of how frequently assets within a fund are bought and sold by the managers. Calculated as the lesser of purchases or sales over the average month end net asset values.

Beta: A measure of volatility in relation to the market as a whole. A beta of 1 means a fund has about the same volatility as the market. A beta greater than 1 would indicate that the fund is more volatile than the market, while a beta less than 1 would indicate less volatility.

Tracking Error: A divergence between the price behaviour of a position or a portfolio and the price behaviour of a benchmark.

Standard Deviation: A statistical measure of distribution around an average which depicts how widely returns varied over a certain period of time. When a fund has a high Standard deviation, the predicted range of performance is wide, implying greater volatility.

6. Investment considerations

Investment Considerations

The fund holdings will change and the information provided should not be considered as a recommendation to purchase or sell a particular security. There is no assurance that the securities mentioned remain in the Fund's portfolio or that securities sold have not been repurchased. There can be no guarantee that any strategy will be successful. All investing involves risk, including the potential loss of principal. Certain risks related to an investment in the Funds are summarized below:

Foreign Investment and Emerging Markets Risk: Foreign investments can be riskier than U.S. investments. Potential risks include adverse political and legal developments affecting issuers located and/or doing business in foreign countries, currency risk that may result from unfavourable exchange rates, liquidity risk if decreased demand for a security makes it difficult to sell at the desired price, and risks that stem from substantially lower trading volume on foreign markets. These risks are generally greater for investments in emerging markets, which are also subject to greater price volatility, and custodial and regulatory risks.

Foreign Markets: Investments in foreign markets entail special risks such as currency, political, economic, and market risks. The risks of investing in emerging-market countries are greater than the risks generally associated with foreign investments. Frontier market countries generally have smaller economies and even less developed capital markets or legal and political systems than traditional emerging market countries. As a result, the risks of investing in emerging market countries are magnified in frontier market countries.

Bond Funds will tend to experience smaller fluctuations in value than stock funds. However, investors in any bond fund should anticipate fluctuations in price, especially for longer-term issues and in environments of rising interest rates. Interest rate risk is the risk that the values of the debt securities and other instruments in a fund's portfolio will decline because of increases in interest rates, which can adversely affect the fund's performance.

Non-Diversified Risk: The fund is non-diversified, so it may be more exposed to the risks associated with individual issuers than a diversified fund.

Derivatives Risk: Investments in derivatives can be volatile. Potential risks include currency risk, leverage risk (the risk that small market movements may result in large changes in the value of an investment), liquidity risk, index risk, pricing risk, and counterparty risk (the risk that the counterparty may be unwilling or unable to honor its obligations).

Ashmore Investment Management (US) Corp., a broker-dealer registered with the Securities and Exchange Commission, is the principal underwriter and distributor of the Funds' shares.

This material must be preceded or accompanied by a prospectus. An investor should consider the fund's investment objectives, risks, and charges and expenses before investing or sending money.
