1. Performance summary

Fund facts

Benchmark MSCI EM Net	Operating expenses Class I	Symbol ESIGX	Total 2.21	Net 1.05
<i>Ashmore has contractually agreed to waive or reimburse certain fees and expenses until February 28, 2026. The expense limitation arrangement may only be terminated prior to that date by the Board of Trustees.</i>				

Performance inception

Feb 26, 2020

Portfolio size

USD 12.4 million

Dividend frequency

Quarterly

Fund objective and strategy

The Fund seeks long-term capital appreciation. Investing principally in equity securities and equity-related investments of Emerging Market Issuers, which may be denominated in any currency, including the local currency of the issuer, focusing on issuers that the Investment Manager believes satisfy the ESG (Environmental, Social and Governance) Criteria.

Period performance - Class I as of 03/31/2025

Net returns %	3M	YTD	1 year	3 years	5 years	10 years	SI
Fund	-0.19	-0.19	7.22	1.82	9.52	-	4.60
Benchmark	2.93	2.93	8.09	1.44	7.94	-	3.56
Excess	-3.12	-3.12	-0.87	0.38	1.58	-	1.04

Calendar year performance - Class I as of 03/31/2025

¹The MSCI EM is a free float-adjusted market capitalization index that is designed to measure equity market performance in the global Emerging Markets. You cannot invest directly in an index.

Past performance does not guarantee future results. The performance data quoted represents past performance and current returns may be lower or higher. The investment return and net asset value will fluctuate so that shares, when redeemed, may be worth more or less than the original cost. To obtain performance current to the most recent month-end, please call 1-866-876-8294. Periods greater than one year are annualized. Returns are calculated as the movement in net price over the specified performance period, assuming full dividend reinvestment. Changes in rates of exchange between currencies may cause the value of investments to decrease or increase. The information above shows only the performance of the Fund's Institutional Class Shares. Although Class A and Class C shares would have similar annual returns (because all the Fund's shares represent interests in the same portfolio of securities), Class A and Class C performance would be lower than Institutional Class performance because of the lower expenses paid by Institutional Class shares of the Fund. The information above does not reflect any sales loads applicable to Class A or Class C shares. The performance shown above would be lower if it reflected sales charges applicable to Class A and Class C shares.

2. Performance analysis

3Month country performance data has been provided for constituents in the MSCI EM Index.

3Month sector performance refers to defined MSCI EM sector indices.

3. Fund positioning versus benchmark

Fund statistics

Statistics	Fund	Benchmark	Definition
Price/earnings forward	13.0x	11.8x	The ratio of share price to next 12 months estimated earnings per share.
Price/earnings	15.3x	14.4x	The ratio of share price to last 12 months earnings per share.
Return on equity	20.7%	12.7%	A profitability ratio calculated as net income divided by average shareholders' equity.

Fund characteristics

Characteristics	Fund	Benchmark	Definition
Weighted average market cap	\$174.2bn	\$158.9bn	The average market capitalisation of the fund weighted by the size of each position and its corresponding market capitalisation.
Number of holdings	43	1149	Number of issuers the fund holds.
Standard deviation	19.6	17.5	A statistical measure of distribution around an average which depicts how widely returns varied over a certain period of time.
Tracking error	6.0	-	The annualised standard deviation of the fund's returns relative to the benchmark. A measure of active risk.
Beta	1.1	-	Measure of the historical fund sensitivity to the systematic risk represented by the fund's benchmark.
Active share	78.5	-	The difference in weight of fund holdings versus benchmark holdings including cash.

Data based on Bloomberg consensus estimates

Benchmark: MSCI Emerging Markets

Where shown, Standard Deviation, Tracking Error and Beta are for 3 year period, or 1 year if 3 years of data are not available.

4. Ashmore group review

Ashmore is a dedicated Emerging Markets (EM) investment manager. We focus on a number of investment themes including external debt, local currencies and local currency debt, corporate debt, blended debt, equities, alternatives (incorporating distressed debt, private equity, infrastructure and real estate), multi-asset and overlay/liquidity. We manage pooled funds, segregated accounts and white label products for a range of global institutional clients including central banks and sovereign wealth funds, government and corporate pension plans, banks, insurance companies and non-profit organisations as well as distributors and high net worth individuals.

- Ashmore Group plc, parent company, listed on the London Stock Exchange
- 275 staff employed globally
- Team based investment process, unchanged since 1992
- 99 member global investment team
- 29 dedicated in-house legal and compliance professionals
- 34-strong business development and client servicing team
- USD 46.2 billion* in assets under management as at 31 March 2025.

*Estimated figure only

AUM theme split - by primary Fund theme

There can be no guarantee that any strategy (risk management or otherwise) will be successful. All investing involves risk, including potential loss of principal.

5. Definitions

Definitions

Fund Weight: The percentage of fund net assets represented by the position.

Benchmark: A financial index against which the performance of a fund or investment strategy can be measured.

Benchmark Weight: The percentage of the benchmark represented by the position.

Active Weight: The difference between the fund weight and the benchmark weight in the position.

Attribution analysis:

Asset Allocation: refers to the contribution to fund performance relative to the benchmark that is derived from differences in country exposure between the fund and the benchmark.

Security Selection: refers to the contribution to fund performance relative to the benchmark that is derived from the selection of individual securities.

Total: is the total attribution for the fund and combines Asset allocation and Security selection decisions.

Stock Attribution Total: refers to the contribution to fund performance resulting from stock exposure relative to the performance of the local country market in the benchmark.

6. Investment considerations

Investment considerations

The Fund holdings will change and the information provided should not be considered as a recommendation to purchase or sell a particular security. There is no assurance that the securities mentioned remain in the Fund's portfolio or that securities sold have not been repurchased. There can be no guarantee that any strategy will be successful. All investing involves risk, including the potential loss of principal. Certain risks related to an investment in the Funds are summarized below:

Foreign Investment and Emerging Markets Risk: Foreign investments can be riskier than U.S. investments. Potential risks include adverse political and legal developments affecting issuers located and/or doing business in foreign countries, currency risk that may result from unfavourable exchange rates, liquidity risk if decreased demand for a security makes it difficult to sell at the desired price, and risks that stem from substantially lower trading volume on foreign markets. These risks are generally greater for investments in emerging markets, which are also subject to greater price volatility, and custodial and regulatory risks.

Foreign Markets: Investments in foreign markets entail special risks such as currency, political, economic, and market risks. The risks of investing in emerging-market countries are greater than the risks generally associated with foreign investments. Frontier market countries generally have smaller economies and even less developed capital markets or legal and political systems than traditional emerging market countries. As a result, the risks of investing in emerging market countries are magnified in frontier market countries.

Bond Funds will tend to experience smaller fluctuations in value than stock funds. However, investors in any bond fund should anticipate fluctuations in price, especially for longer-term issues and in environments of rising interest rates. Interest rate risk is the risk that the values of the debt securities and other instruments in a fund's portfolio will decline because of increases in interest rates, which can adversely affect the fund's performance.

Derivatives Risk: Investments in derivatives can be volatile. Potential risks include currency risk, leverage risk (the risk that small market movements may result in large changes in the value of an investment), liquidity risk, index risk, pricing risk, and counterparty risk (the risk that the counterparty may be unwilling or unable to honor its obligations).

ESG Criteria Risk: The ESG Criteria applied by the Fund may cause the Fund to perform differently - positively or negatively -when compared to funds that do not take into account similar characteristics. The application of the ESG Criteria may cause the Fund to sell or avoid stocks that subsequently perform well. There is a risk that the issuers identified by the ESG Criteria may not operate sustainably or within such criteria as expected. Furthermore, different interpretations of what it means for an issuer to be sustainable or to have positive ESG metrics may be applied by market participants.

Ashmore Investment Management (US) Corp., a broker-dealer registered with the Securities and Exchange Commission, is the principal underwriter and distributor of the Funds' shares.
