

# Ashmore SICAV Emerging Markets Impact Debt Fund (SICAV IDF)

Share class: USD Inst

Marketing Communication

# FIXED INCOME

# Fund objective and strategy

SICAV IDF is an actively managed open ended daily dealing UCITS V Luxembourg registered fund. The Fund seeks to generate positive, measurable environmental and/or social impact, aligned with the UN Sustainable Development Goals, alongside a total return, by investing in Emerging Market transferable debt securities and related instruments. The Fund follows a best ideas approach across Hard Currency EM debt, focussed mainly on Corporates and Impact Bonds. Non-USD denominated assets will be hedged back into USD. All the Fund's investments — except those intended for hedging, liquidity or assets being disposed — will be Impact Investments. While the Fund references the benchmark for performance comparison, it can differ from the benchmark's composition and also hold assets which are not part of the benchmark. Information on Ashmore's Impact Investment Framework is available on the Ashmore Group website.

#### Performance and exposure disclaimers

1. Past performance (actual or simulated) is not a reliable indicator of future results. Periods greater than one year are annualised, dividends reinvested, index gross. The value of an investment in the Fund may fall as well as rise and investors may not get back the amount originally invested. Changes in rates of exchange between currencies may cause the value of investments to decrease or increase. 2. All performance statistics shown over rolling 3 years (or 1 year where 3 years of data is not yet available). Sharpe ratio assumes the US 3-month T-Bill risk free rate. 3. Duration and Yield statistics include all positions with a verified duration and yield figure, subject to the exclusion of defaulted corporate debt positions. Bond securities with less than 1 year to maturity show yield to maturity on an annualised basis. 4. Theme values have been rebased to 100% based on the theme type of the underlying fund instruments. 5. Currency and country exposures may be reduced by active FX hedging (if applicable). 6. Credit ratings are based on issuers with a rating, figures provided are based on the middle of the three rating agencies S&P, Moody's and Fitch. If only two of the ratings are available then the lower rating of the two will be used. Percentages gross to 100%, where applicable. 7. Top 10 holdings do not include derivatives apart from total return swaps and pnotes. 8. For investments in Ashmore managed funds (where applicable), allocation and holdings information is shown on a "look through" basis, whereas attribution information is not shown on a look through basis. 9. Hedged benchmarks are used where applicable. 10. Attribution is reported Gross and shown in USD terms unless otherwise stated. 11. Ongoing Charges Figure (OCF) as at 30.06.2025. 12. A dash (-) represents zero holding. 0.0 and 0.00 represents a fractional holding. 13. Ashmore's Fund yield to maturity (YTM) (for hedged classes this is in USD) calculation applies a vield for defaulted sovereign and quasi-sovereign securities, in line with index provider treatment. This can inflate the fund and index yield to maturity given this assumes a full repayment at par. Defaulted corporate debt positions have their yield set to zero. Additionally, please note that Ashmore's reported YTM for fund and index are calculated on a 'weighted average security yield' basis per market convention, whereas the JP Morgan Index Monitor calculates YTM using the IRR of the underlying index security cashflows. Sources are Ashmore, data provider or administrator where

Risk Warning: Investors should consider certain risk factors peculiar to investing in Emerging Markets, before taking any investment decision. Emerging Markets (EM) carry risks as well as rewards. These require consideration of matters not usually associated with investing in securities of issuers or financial derivative instruments linked to securities of issuers in the Developed Markets. The economic and political conditions differ from those in Developed Markets, and may offer less social, political and economic stability. EM may be more volatile than more mature markets. The value of your investment could go down as well as up. In extreme circumstances, this could result in a total loss of your investment. EM may suffer from liquidity problems; changes in rates of exchange between currencies may cause the value of your investment to decrease or increase; operational risks of investing are higher than in more developed markets. For a full description of these and further risks, you should refer to the latest Prospectus.
