### Performance

Past Performance (actual or simulated) does not predict future returns.

Net returns %	1 month	YTD	1 year	3 years	5 years	10 years	Since inception
Fund	0.85	0.67	10.59	-	-	-	8.66
Benchmark	0.91	1.86	11.91	-	-	-	9.71
Excess	-0.06	-1.18	-1.32	-	-	-	-1.05

Periods greater than one year are annualised, dividends reinvested, index gross. The value of an investment in the Fund may fall as well as rise and investors may not get back the amount originally invested. Changes in rates of exchange between currencies may cause the value of investments to decrease or increase. Where the 'Fund inception date' and the 'Performance inception date' differ, a new share class has been launched. \*JPM 50% EMBI GD & 50% GBI-EM-GD (Source: Ashmore & JP Morgan). ### Performance and exposure disclaimers

1. Past performance (actual or simulated) is not a reliable indicator of future results. Periods greater than one year are annualised, dividends reinvested, index gross. The value of investments may fall as well as rise and investors may not get back the amount originally invested. Changes in exchange rates may also affect the value of investments. 2. Performance statistics shown over rolling 3 years (or 1 year where 3 years of data is not yet available). 3. Duration and Yield statistics include positions with a verified duration and yield figure, subject to the exclusion of defaulted corporate debt positions. Bond securities with less than 1 year to maturity show yield to maturity on an annualised basis. 4. Theme values are rebased to 100% based on the underlying fund instruments. 5. Currency and country exposures may be reduced through active FX hedging (if applicable). 6. Credit ratings are based on issuers with an available rating, where ratings from S&P, Moody's and Fitch are available, the middle rating is used. Where only two agency ratings are available, the lower of the two ratings is used. Percentages may not total 100% due to rounding. 7. Top 10 holdings exclude derivatives exposures, other than total return swaps and p-notes. 8. For investments in Ashmore managed funds allocation and holdings information is presented on a "look through basis", whereas attribution information is not shown on a look through basis. 9. Hedged benchmarks are used where applicable. 10. Attribution is reported gross and shown in USD terms unless otherwise stated. 11. A dash (-) represents a zero holding. Values shown as 0.0 and 0.00 represents a fractional holding. 12. Ongoing Charges Figure (OCF) as at 31.12.2025. 13. Country and attribution analysis may exclude cash unless otherwise stated. Cash and cash equivalent exposures (including T-bills) are reported on a net market exposure basis and may offset other exposure positions within the fund. Reported cash exposure should therefore not be interpreted as uninvested capital and may reflect liquidity management, collateral management, hedging or fund implementation activity. 14. Ashmore's Fund yield to maturity (YTM), calculation applies a yield for defaulted sovereign and quasi-sovereign securities, in line with index provider treatment. This can inflate the fund and index yield to maturity as it assumes full repayment at par. Defaulted corporate debt positions have their yield set to zero. Additionally, from May 2026 YTM for both the fund and index (where the index provider is JP Morgan) is calculated using a duration-weighted average security yield methodology. Reported duration continues to exclude defaulted positions. As a result, yield and duration metrics may not be directly comparable with prior periods. Sources are Ashmore, data provider or administrator where appropriate.

## Ashmore SICAV Emerging Markets Total Return Fund 2 (SICAV TRD2F)

Share class: USD Inst

**Risk Warning:** Investors should consider certain risk factors peculiar to investing in Emerging Markets, before taking any investment decision. Emerging Markets (EM) carry risks as well as rewards. These require consideration of matters not usually associated with investing in securities of issuers or financial derivative instruments linked to securities of issuers in the Developed Markets. The economic and political conditions differ from those in Developed Markets, and may offer less social, political and economic stability. EM may be more volatile than more mature markets. The value of your investment could go down as well as up. In extreme circumstances, this could result in a total loss of your investment. EM may suffer from liquidity problems; changes in rates of exchange between currencies may cause the value of your investment to decrease or increase; operational risks of investing are higher than in more developed markets. For a full description of these and further risks, you should refer to the latest Prospectus.
