## Fund objective and strategy

The Fund seeks to achieve its objective by investing principally in debt instruments of Sovereigns and Quasi-Sovereigns of EM Countries and EM Supra-Nationals denominated principally in Hard Currencies (i.e., the U.S. dollar or any currency of a nation in the G-7). The Fund has no restrictions on individual security duration and observes a policy to normally invest at least 80% of its net assets (plus borrowings made for investment purposes) in bonds and other debt instruments of Sovereign or Quasi-Sovereign issuers of Emerging Market Countries and EM Supra-Nationals.

Past performance does not guarantee future results. The performance data quoted represents past performance and current returns may be lower or higher. The investment return and net asset value will fluctuate so that shares, when redeemed, may be worth more or less than the original cost. To obtain performance current to the most recent month-end, please call 1-866-876-8294. Periods greater than one year are annualized. Returns are calculated as the movement in net price over the specified performance period, assuming full dividend reinvestment. Changes in rates of exchange between currencies may cause the value of investments to decrease or increase. The information above shows only the performance of the Fund's Institutional Class Shares. Although Class A and Class C shares would have similar annual returns (because all the Fund's shares represent interests in the same portfolio of securities), Class A and Class C performance would be lower than Institutional Class performance because of the lower expenses paid by Institutional Class shares of the Fund. The information above does not reflect any sales loads applicable to Class A or Class C shares. The performance shown above would be lower if it reflected sales charges applicable to Class A and Class C shares.

30 SEC Day Yield: Unsubsidized	4.77%
30 SEC Day Yield: Subsidized	5.41%
Average life	12.99
Modified duration	7.07
Yield to maturity	10.95%

**Unsubsidized SEC 30 Day Yield:** computed under a SEC standardized formula based on net income earned over the past 30 days. It excludes contractual expense reimbursements, resulting in a lower yield.

SEC 30 day yield: computed under a SEC standardized formula based on net income earned over the past 30 days. It is a 'subsidized' yield, which means it includes contractual expense reimbursements and it would be lower without those reimbursements

Average life: Average time to maturity for the fund's securities (expressed in years).

**Duration:** The average modified duration value provided is a measure expressed in years of the fund's sensitivity that would result from a 1% change in interest rates.

Yield to maturity: Average anticipated rate of return for the fund's positions if held to maturity.

#### FUND UPDATE September 2025

#### Ashmore Emerging Markets Debt Fund

Investment considerations: It is possible to lose money on an investment in the Fund. The Fund will be affected by the investment decisions, techniques and risk analyses of the Fund's Investment Manager and there is no guarantee that the Fund will achieve its investment objective. The principal risks of investing in the Fund, which could adversely affect its net asset value, yield and total return are: Foreign investment and Emerging Markets risk: Foreign investments can be riskier than U.S. investments. Potential risks include adverse political and legal developments affecting issuers located and/or doing business in foreign countries, currency risk that may result from unfavorable exchange rates, liquidity risk if decreased demand for a security makes it difficult to sell at the desired price, and risks that stem from substantially lower trading volume on foreign markets. These risks are generally greater for investments in emerging markets, which are also subject to greater price volatility, and custodial and regulatory risks. Foreign markets: Investments in foreign markets entail special risks such as currency, political, economic, and market risks. The risks of investing in emerging-market countries are greater than the risks generally associated with foreign investments. Frontier market countries generally have smaller economies and even less developed capital markets or legal and political systems than traditional emerging market countries. As a result, the risks of investing in emerging market countries are magnified in frontier market countries, and Bond fund risk: Bond Funds will tend to experience smaller fluctuations in value than stock funds. However, Investors in any bond fund should anticipate fluctuations in price, especially for longer term issues and in environments of rising interest rates. For a full description of these and further risks, investors should refer to the fund's latest prospectus.
